END OF OCTOBER 2020 REPORT

During the month of October we did the following home visits and activities.

Total number of homes visited **122**

Total number of activities **02**

Week 1

During this week we reached 07 clients and among the catching story was of Keezabu Cissy who has shown quick progress especially in her newly started shop business. Cissy in a period of one month has had total expenditure of 212,750shs, total profits 87,500shs, and customer debts of 6200shs and has saved 15,000shs. This fast progress has given high hopes that Cissy may sustain a business. On the other hand she reported her health is now very ok after we gave her treatment when she was complaining of headache and on and off fevers. She also has a safe box where she saves her money. Generally is living a healthy sounding life.

In the same week we had an outreach on HIV Counseling and Targeted Testing in Kicwamba sub county Kinyabuhara primary school. People tested all turned negative and a lot of condom promotion lessons were taught and over 700 pieces distributed. There was also football competition that the aspiring sub county was the chief guest who handed over the trophy to winning teams between males and females.

Week 2

This week we visited 11 clients and progress was seen in Kyakyo Alice who continue to get better and better every day. Alice reported steady improvement is now able to walk properly with elbow crutch. She has high hopes of starting to work soon though she finds it a challenge to take care of her family but is appreciating the good work YAWE has done to take care of her ever since she got the accident 5 months ago up to now when she is almost walking independently again.

In the same week we got more good news after Margret's Goat gave birth to 2 kids which one of the female kid will be given to another person when it gets ready. Margret was also found well though still struggling with independent walking. We did practices in walking using a walking frame. She still had her epilepsy treatment. Her mother was very happy to Margret's goat giving birth again after kids of its first died.

In the same week we paid school fees for our finalists student who went back to school. Mackline who is now in primary 7 her artificial limb has grown shorter

than her height that makes it have a lot of discomfort while walking and at times it burns her because she has grown bigger than its size. We need to make for her a proper fitting size again.

Week 3.

In this week visited 100 homes giving Covid19 relief food which got from the district of Kabarole. YAWE in the previous food distribution exercises was working hand in hand with the district to ensure that they have served the most affected populations who were suffering of hunger due to the lockdown. This round the district also received some food from local government and decided to share with YAWE to also serve their most affected vulnerable groups in the community. We successfully distributed the posho given in 5kgs pack to 100 people.

In the same week we found that there Gloria's goat is ready to be taken away to another person. Gloria received the 2 years ago and had not had a female kid but now it produced it and it's fully grown and ready to be taken away.

Week 4

During this week we visited our 4 new clients among which there was Ronald 30 years old male with incomplete spinal cord injury to a road accident. He has difficulty with getting his hands hold objects and they are all in extension. He also can't sit, stand and walk but spends most his time lying on bed. We did supported sitting at the age of the bed, passive range of motion exercises of the both the upper and lower limbs, bridging exercises and active assisted mobilization of the trunk accompanied with seductive dissociation training of the trunk.

We also visited Lucy who is healing from the advanced stages of HIV/AIDS. She reported to be feeling much better and the pain in the back also went down. Her left side is getting a little better although things like squatting and step ups are still a little harder for her to execute. The plan is to continue working on getting her left limb much stronger.

Challenges

Rainy season has affected us in successfully conducting our field activities and causing much delays to reach other places.
